DATA SCIENCE | ANALYTICS | AI

MOTIVATION *I am passionate about solving business problems with data science and analytics. I apply statistical modeling, machine learning, and GenAI to deliver measurable value for teams, businesses, and end-users. I learn fast and continuously improve my tools, workflows, and communication.*

SKILLS & TOOLS

Programming: SQL, Python

Tools: Excel, Tableau, Github, Anaconda, AWS (S3, Lambda, EC2 basics, SageMaker)

Math and Stats: Probability, Hypothesis Testing, AB Testing, CLT, Common Distributions

ML Algorithms: Linear Regression, Logistic Regression, Decision Trees, Random Forest, KNN, k-means, PCA, Association Rule Learning, Causal Impact Analysis

GenAI: LLMs, prompt engineering, RAG, agentic AI

PROJECTS

GenAI SQL Agent (Connected To A Live Cloud-Based Database)

- Built an end-to-end SQL agent that connects securely to PostgreSQL, exposes only required schema, uses a modern LLM and LangChain SQL tools to generate and run queries, and returns both results and human-readable explanations for self-serve analytics.

Quantified Sales Uplift Using Causal Impact Analysis

- For a grocery store, used Causal Impact Analysis and the *pycausalimpact* library to evaluate the sales uplift that followed the introduction of a new "Delivery Club" initiative.

The "You Are What You Eat" Customer Segmentation

- Applied k-means clustering on grocery transactions to group customers into distinct shopper types, enabling more relevant content and promotions based on spend, basket mix, and visit patterns.

Prediction of Customer Loyalty Scores with ML

- Built out a predictive model to find relationships between customer metrics and loyalty score. Tested linear regression, a decision tree and a random forest to predict loyalty.

EDUCATION

BA Mathematics
Duke University

MFA Directing
Yale School of Drama

PhD German Studies
Stanford University

DATA SCIENCE | ANALYTICS | AI

EXPERIENCE **Data Annotation - January - December 2023**

- Evaluated LLM responses for instruction-following, completeness, factuality, conciseness and relevance, style and tone, overall quality, and harmlessness.
- Provided structured feedback that improved model alignment, conciseness, and user relevance.

Andrew Wood Acting Studio- September 2004-Present

- Founded and ran acting studio; managed budgets, enrollment pipeline, and P&L. Coached 1,000+ students.
- Analysed enrollment and marketing metrics to optimise class schedules, pricing, and curriculum based on student feedback.

Prior Technical Experience March 1999-January 2002

- Java Developer and Front-End Developer (3 years total): built and maintained production applications, collaborating with engineering teams and using software engineering fundamentals (version control, debugging, testing)

COURSES & CERTS

Data Science Professional Certification (Data Science Infinity)

Actionable Learnings: Used SQL and Python to extract, clean, and analyze data, then built and validated ML models (regression, classification, clustering, association rules) and automated end-to-end workflows. Developed Tableau dashboards and a Streamlit-based ML app. Gained hands-on Generative AI experience (LLMs, prompt engineering, RAG, agentic AI) through projects like an AI help-desk assistant and cloud-linked SQL agent. Leveraged AWS (S3, Lambda, CloudShell, EC2) and Git/GitHub for deployment and collaboration, turning ambiguous business needs into measurable, data-driven outcomes.

Data Science Professional Certification (UT Austin, McCombs School of Business)

Actionable Learnings: Applied a range of statistical tests, used Python (Pandas) to extract and manipulate data, engaged in EDA, applied linear regression with examination of assumptions of linear regression, built models for classification using logistic regression, decision trees, and random forests, employed K means clustering, made use of SQL to extract and manipulate data, using window functions, sub-queries and common table expressions.
